Environmental Policy

Objectives

The LEGO Group strives to ensure a high environmental standard across our value chain, i.e. from our suppliers through to our customers and consumers. Our aim is to plan and execute activities that minimise or eliminate the impact on the environment from the production and life cycle of our products.

We are guided by our principle of positive impact across the environmental and social responsibility agenda.

The LEGO Group's objectives are to protect natural resources by focusing on materials (including waste), and to reduce our climate impact by focusing on energy. We seek to achieve this through a range of means – including mitigating actions, stakeholder dialogue and collaboration – which are guided by coherent processes and standards.

Approach to business activities

The LEGO Group strives to improve the environmental performance by:

- Encouraging the use and diffusion of environmentally friendly technologies and sustainable materials.
- Using processes and standards to monitor, measure and evaluate our progress based on our objectives.

Operations: We strive to reduce the most significant environmental impact in our operations, by focusing on greenhouse gas emissions and waste generated. We consider the impact from our operations using an end-to-end approach. We monitor and evaluate our environmental performance on a regular basis.

The LEGO Group engages employees at all levels to assume responsibility for – and participate in – environmental activities.

We identify legislation and standards that The LEGO Group must adhere to, and we ensure that The LEGO Group complies with all identified requirements. The LEGO Group certifies all of our production sites according to the international environmental management standards ISO 14001. In addition, we adhere to the UN Global Compact principles.

Products and packaging: We consider environmental concerns and impacts for our products and packaging. This includes the use of sustainable materials, product development, distribution, consumer use and disposal.

Suppliers: We define environmental standards for our suppliers in the LEGO Group Code of Conduct. We engage actively with our suppliers through on-site audits and dialogue, to ensure and influence their environmental awareness and practice. We also cooperate with key suppliers to reduce greenhouse gas emissions.
