

# LEGO® Campus

## Facts and Figures

Architects: C.F. Møller • Consulting engineers: Niras • General Contractor: K. G. Hansen • Developer: KIRKBI A/S

**Children** continue to be our role models. Our new **LEGO® Campus** in Billund was inspired by a painting of a boy who holds up his creation of a **building made with LEGO bricks**. Brick by brick, the state-of-the-art building is designed to inspire **innovation and creativity** for LEGO employees.

### Designed to inspire

A place for innovation and creativity

The building benefits from:

- ✓ Being created by LEGO **colleagues** to reflect the **company values**
- ✓ **"Neighbourhoods"** with different work environments
- ✓ **Barista and café** to fuel creativity

**Outdoor atriums** and public **park**

Individual and **collaborative workspaces**

**Lounges and play area**

### Focus on sustainability

The construction ensures low energy consumption

**4,150**  
solar panels

cover **6,500 m²** of the roof of the nearby parking house and will **produce more than 1,000,000 kWh** per year

**50%**  
of the energy

requirements for heating, cooling, lighting and ventilation **comes from the solar panels**

"It's wonderful to see these first two buildings open. The team has worked hard to create a workspace that reflects our values and instills a sense of fun. Our mission is to inspire children so it's important we provide our talented colleagues with an environment that is playful and inspires creativity and innovative thinking."

Niels B. Christiansen, CEO

"In the same way you build with LEGO bricks, we took elements our people love and brought them all together to create something unique. For example, employees told us that they wanted the freedom to choose an environment that suited them best for whatever they were working on, but also liked to stay close to teammates. So we built team 'neighbourhoods' which are a mix of individual and collaborative workspaces designed to create a caring environment where people can do great quality work."

Anneke Beerkens, Senior Workplace Anthropologist
