Bat

Let's make a home for bats!

There are more than a thousand types of bats found around the world.

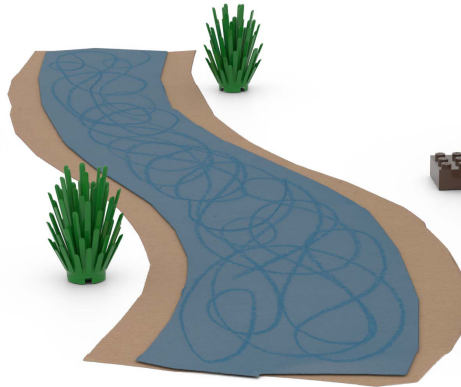

Most of them are nocturnal - they sleep in the day and are active at night. All of them have important roles to play in nature: insect-eating bats keep insects from ruining vegetable and fruit plants, fruit-eating bats help plants grow by scattering seeds as they fly, and other bats are pollinators and help more plants grow as they drink flower nectar and move pollen from one flower to another. Remember! We want to leave bats be and don't want to get too close to them or handle them.

Make sure your bat has what it needs!

- **Food:** Different bats eat different things – insects, fruit, flower nectar!
- **Water:** A small pond or stream, or even a small dish of water.
- **Home:** Different bats sleep in different places! Bats can live in hollow trees, caves, rock crevices, bat boxes, or even under bridges or buildings.

Worm

Worm

Let's make a home for worms!

Earthworms live all over the world, wherever you find soil.

They don't live where the ground is frozen or in very dry deserts. They play an important role in nature: their tunnels add air and water to the soil, making it easier for plants to grow. As worms eat, they help break down rotting plants. And they release lots of healthy nutrients into the soil through their poop!

Make sure your worm has what it needs!

- **Food:** Worms love eating rotting things like fruit and leaves.
- **Water:** Something to keep the soil nice and moist... but not *too* wet!
A stream? A watering can? Something else?
- **Home:** Nice cozy dirt to burrow in.

Butterfly

Butterfly

Let's make a home for butterflies!

There are more than 20,000 types of beautiful butterflies in the world!

Most drink nectar from flowers. They play an important role in nature as pollinators, moving pollen from flower to flower to help new plants grow. Some lay eggs on the tops of leaves and others hide them underneath. The eggs hatch into caterpillars who in time go through a big change called metamorphosis to turn into adult butterflies.

Make sure your butterfly has what it needs!

- **Food:** Flowers! Different types like different plants, so it's good to know what kind of butterfly you're caring for.
- **Water:** Butterflies need to drink, but nothing deep – a shallow puddle, a dish of water, even a damp sponge or some water on leaves.
- **Home:** Some butterflies like logs or wood piles; others like a garden full of plants, some like tiny rock piles, and some like hanging butterfly houses.
