LEGO® Builder

UN GÉANT DE LA SCIENCE ET DU CINÉMA

Parmi les dinosaures les plus connus du grand public, le Triceratops occupe une place de choix. On le découvre dans les musées du monde entier à travers des squelettes impressionnants, et il a aussi marqué les esprits dans *Jurassic Park* (1993). Dans le film, un Triceratops malade est soigné avec beaucoup de douceur par le Dr Ellie Sattler et le vétérinaire du parc, le Dr Gerry Harding. Cette scène nous rappelle une chose essentielle : oui, ces créatures impressionnantes ont réellement existé. Ce n'étaient pas des monstres de cinéma, mais des animaux bien réels, prospérant dans leur monde ancien. Reconnaisable à sa collerette massive et à ses trois cornes, le crâne du Triceratops se transformait au fil de sa croissance. Chez les jeunes individus, les cornes étaient courbées vers le haut, avant de s'orienter vers l'avant à l'âge adulte, tandis que les pointes triangulaires de la collerette se soudaient pour former un bord solide. Les preuves fossiles suggèrent même qu'il pouvait tenir tête à un T. Rex ! Et aujourd'hui, nous sommes fiers de présenter notre version dans la collection LEGO® Jurassic World.

**« 66 MILLIONS D'ANNÉES PLUS TARD,
IL VOLE TOUJOURS
LA VEDETTE »**

**DES
FOSSILES
ET DU CINÉMA
À UN MODÈLE
D'EXPOSITION LUDIQUE**

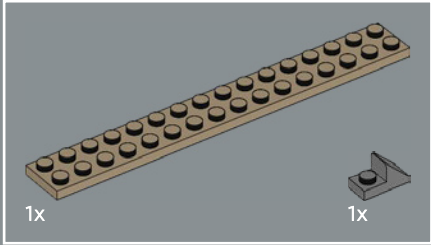

Après le set LEGO® Les fossiles de dinosaures : le Tyrannosaurus rex (76968), nous nous sommes lancés dans la création d'un squelette de *Triceratops horridus* scientifiquement fidèle. Il est entièrement articulé, ce qui vous permet de l'exposer dans votre pose préférée. Même la mâchoire est mobile. À une échelle approximative de 1:21, il s'agit de notre premier squelette de dinosaure LEGO de taille moyenne. Il est présenté dans un environnement de terres humides inspiré de l'Amérique du Nord à la fin du Crétacé, avec des éléments de végétation qu'il aurait pu consommer il y a des millions d'années. À partir de livres, de dessins, de modèles 3D informatiques et de modèles en résine, nous avons développé une représentation authentique de sa morphologie et de sa posture. Nous avons également créé un nouvel élément de côte, plus long, afin de résoudre notre plus grand défi : la cage thoracique. Parmi ses côtes, 10 sont montées sur des connecteurs rotatifs fixés à la colonne vertébrale, permettant de recréer une forme fidèle à la réalité. D'après les connaissances actuelles, le Tricératops vivait probablement en petits groupes. Mais celui-ci se portera parfaitement bien en solitaire... sur votre étagère.

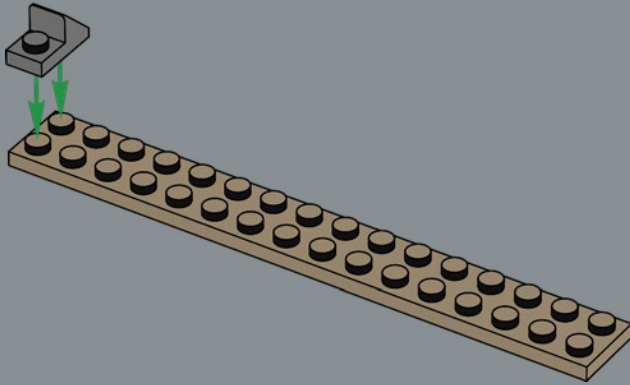

- L'équipe de designers LEGO® Jurassic World
