# A GIANT OF **SCIENCE** AND CINEMA

The Triceratops is one of our most familiar dinosaurs, known from skeletons displayed in museums worldwide, and vividly brought to life in *Jurassic Park* (1993). In the film, an ailing Triceratops is tenderly cared for by Dr. Ellie Sattler and the park's veterinarian, Dr. Gerry Harding. The scene reminded us that, hey, these awe-inspiring creatures were once real animals, thriving in their ancient world! Distinguished by its massive frill and three horns, the Triceratops' skull transformed as it grew: juvenile horns curved upwards before shifting forwards in adulthood, while the frill's triangular spikes fused into a solid edge. Fossil evidence even suggests that it could stand its ground against a T. rex! And now we proudly display our version in the LEGO® Jurassic World collection.

**“66 MILLION YEARS ON,  
IT STILL STEALS  
THE SHOW”**

- The LEGO® Jurassic World Design Team

*JFK*  
2025.

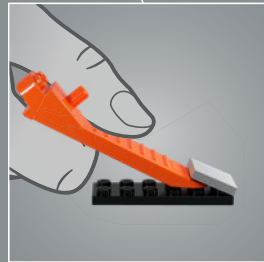

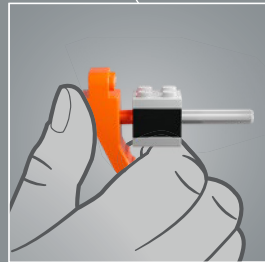

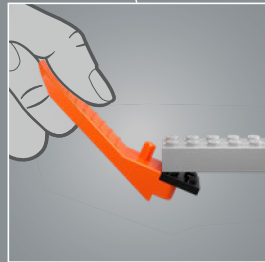

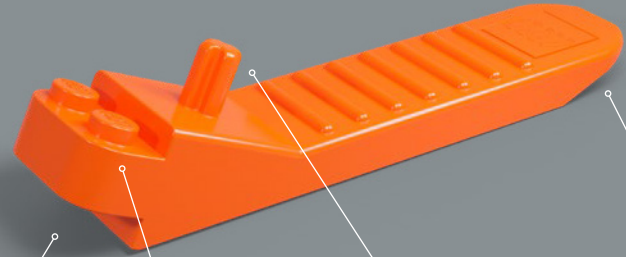

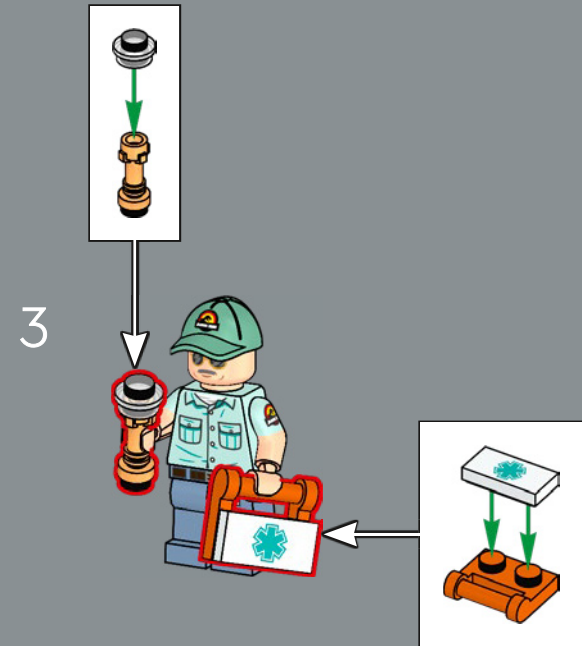

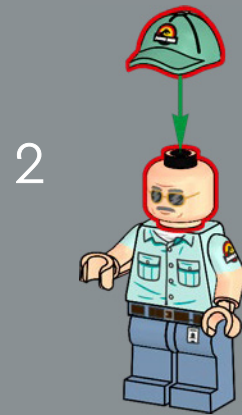

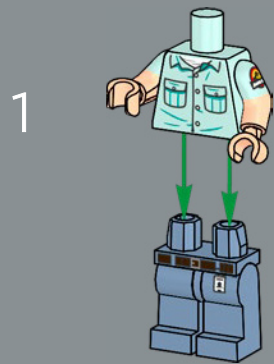

**FROM  
FOSSILS  
AND FILMS  
TO A FUN DISPLAY**

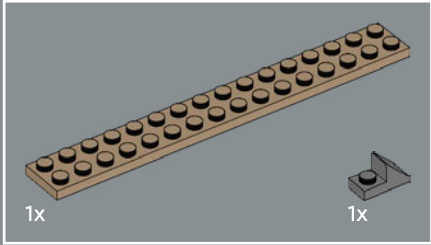

Following the 76968 LEGO® Tyrannosaurus rex, we set out to create a scientifically accurate *Triceratops horridus* skeleton. It's fully articulated so you can display it in your favourite pose. Even the jaw opens. At approximately 1:21 scale, this is our first medium-sized LEGO dinosaur skeleton, shown in a wetland environment inspired by Late Cretaceous North America, with bits of vegetation it might have eaten millions of years ago. From books, drawings, 3D-computer models and resin models, we developed an authentic representation of its shape and posture. We also created a new, longer rib element to solve our biggest challenge: the ribcage. Ten of these ribs are built on rotating connectors attached to the spine to create an accurate shape. From what we know, Triceratops most likely lived in small groups, but this one will thrive alone on your shelf!

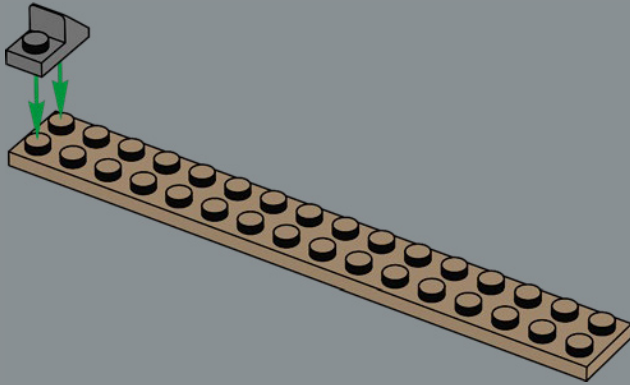

- The LEGO® Jurassic World Design Team
